

Empowering Uptake Through Enhanced Access to Earth Observation Data Knowledge

Unlocking Innovation Through CF4SFD

Mr. P Sibandze

CSIR ICC

Outline

- Current state of data access in South Africa
- Proposed framework
- CF4SFD architecture
- Benefits of CF4SFD
- Case Study
- Conclusion

Current State of Data Access

1. Existing Policies:

A. Spatial Data Infrastructure Act, 2003 (Act No. 54 of 2003)

establishes a framework for developing and managing a spatial data infrastructure in South Africa. It aims to facilitate **capturing, managing, maintaining, integrating, distributing**, and using spatial information.

B. Promotion of Access to Information Act (PAIA) No. 2 of 2000

aims to promote transparency, accountability and informed decision-making by ensuring access to relevant information.

C. Draft National Data and Cloud Policy

aims to create an enabling environment for data and cloud services to ensure equitable access to data and cloud services.

2. Existing platforms:

SAEON, ARC, SAWS, STATSA, SANSA, SEAD-SA, SANBI etc.

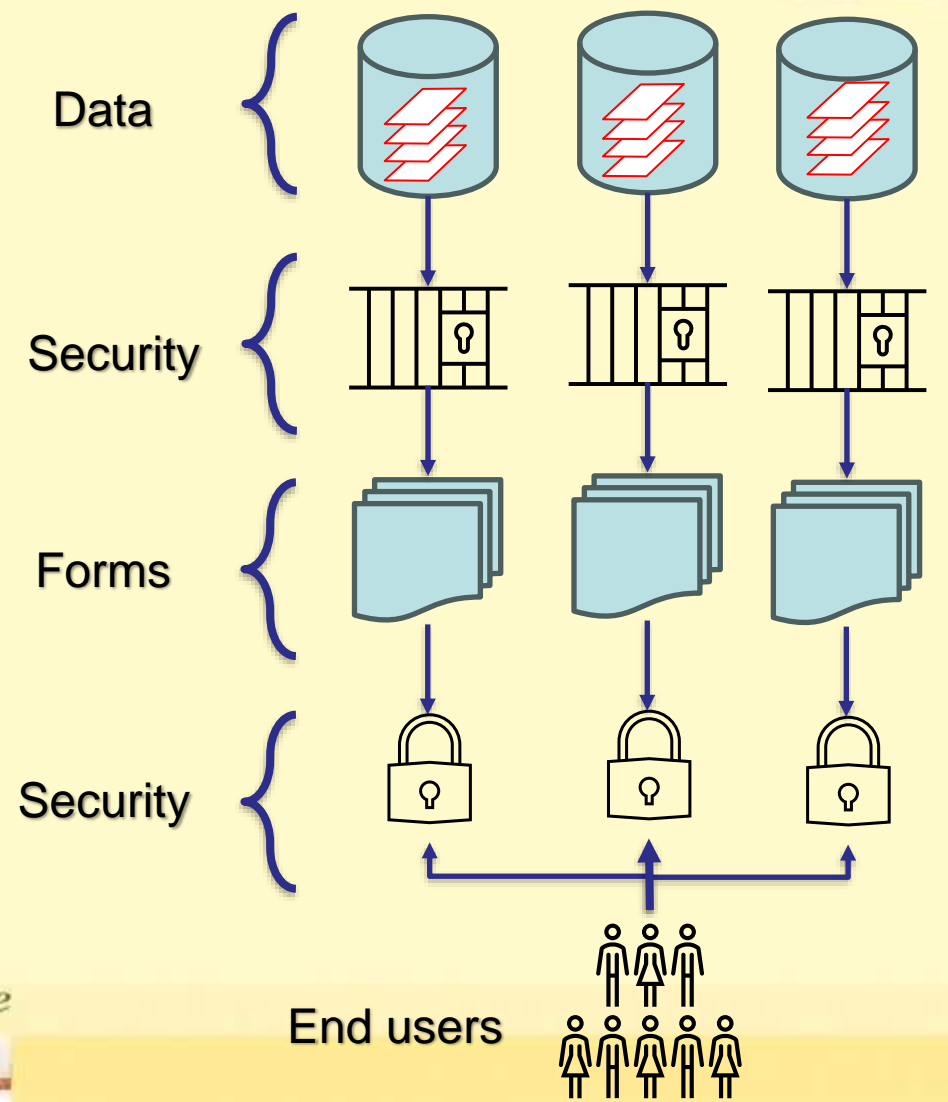

together in excellence

Current State of Data Access

3. Challenges:

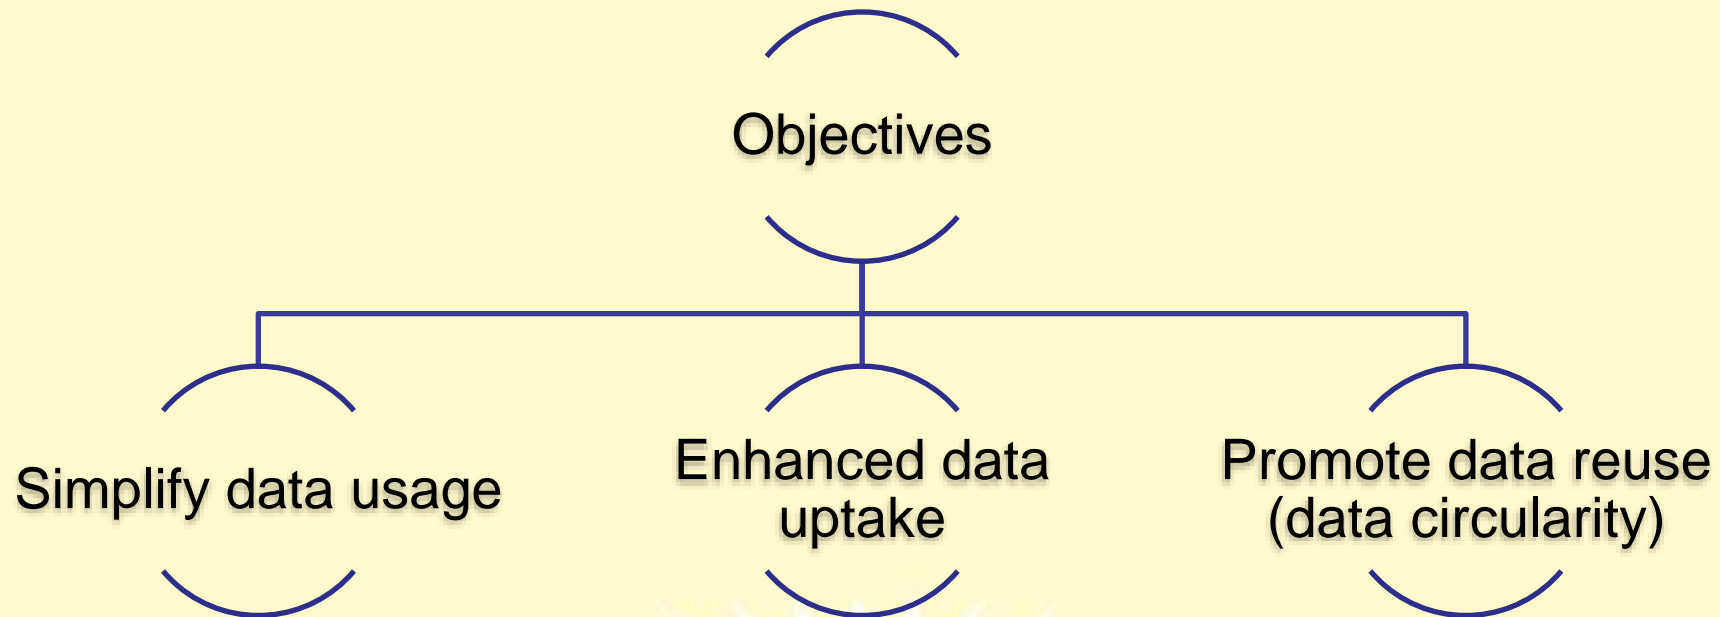

- Decentralized data sources
- Excessive paperwork (B2B emails)
- Data redundancy (climate data)
- Data inconsistencies
- Data security (different protocols)
- Difficulty in data governance
- Increased data retrieval time

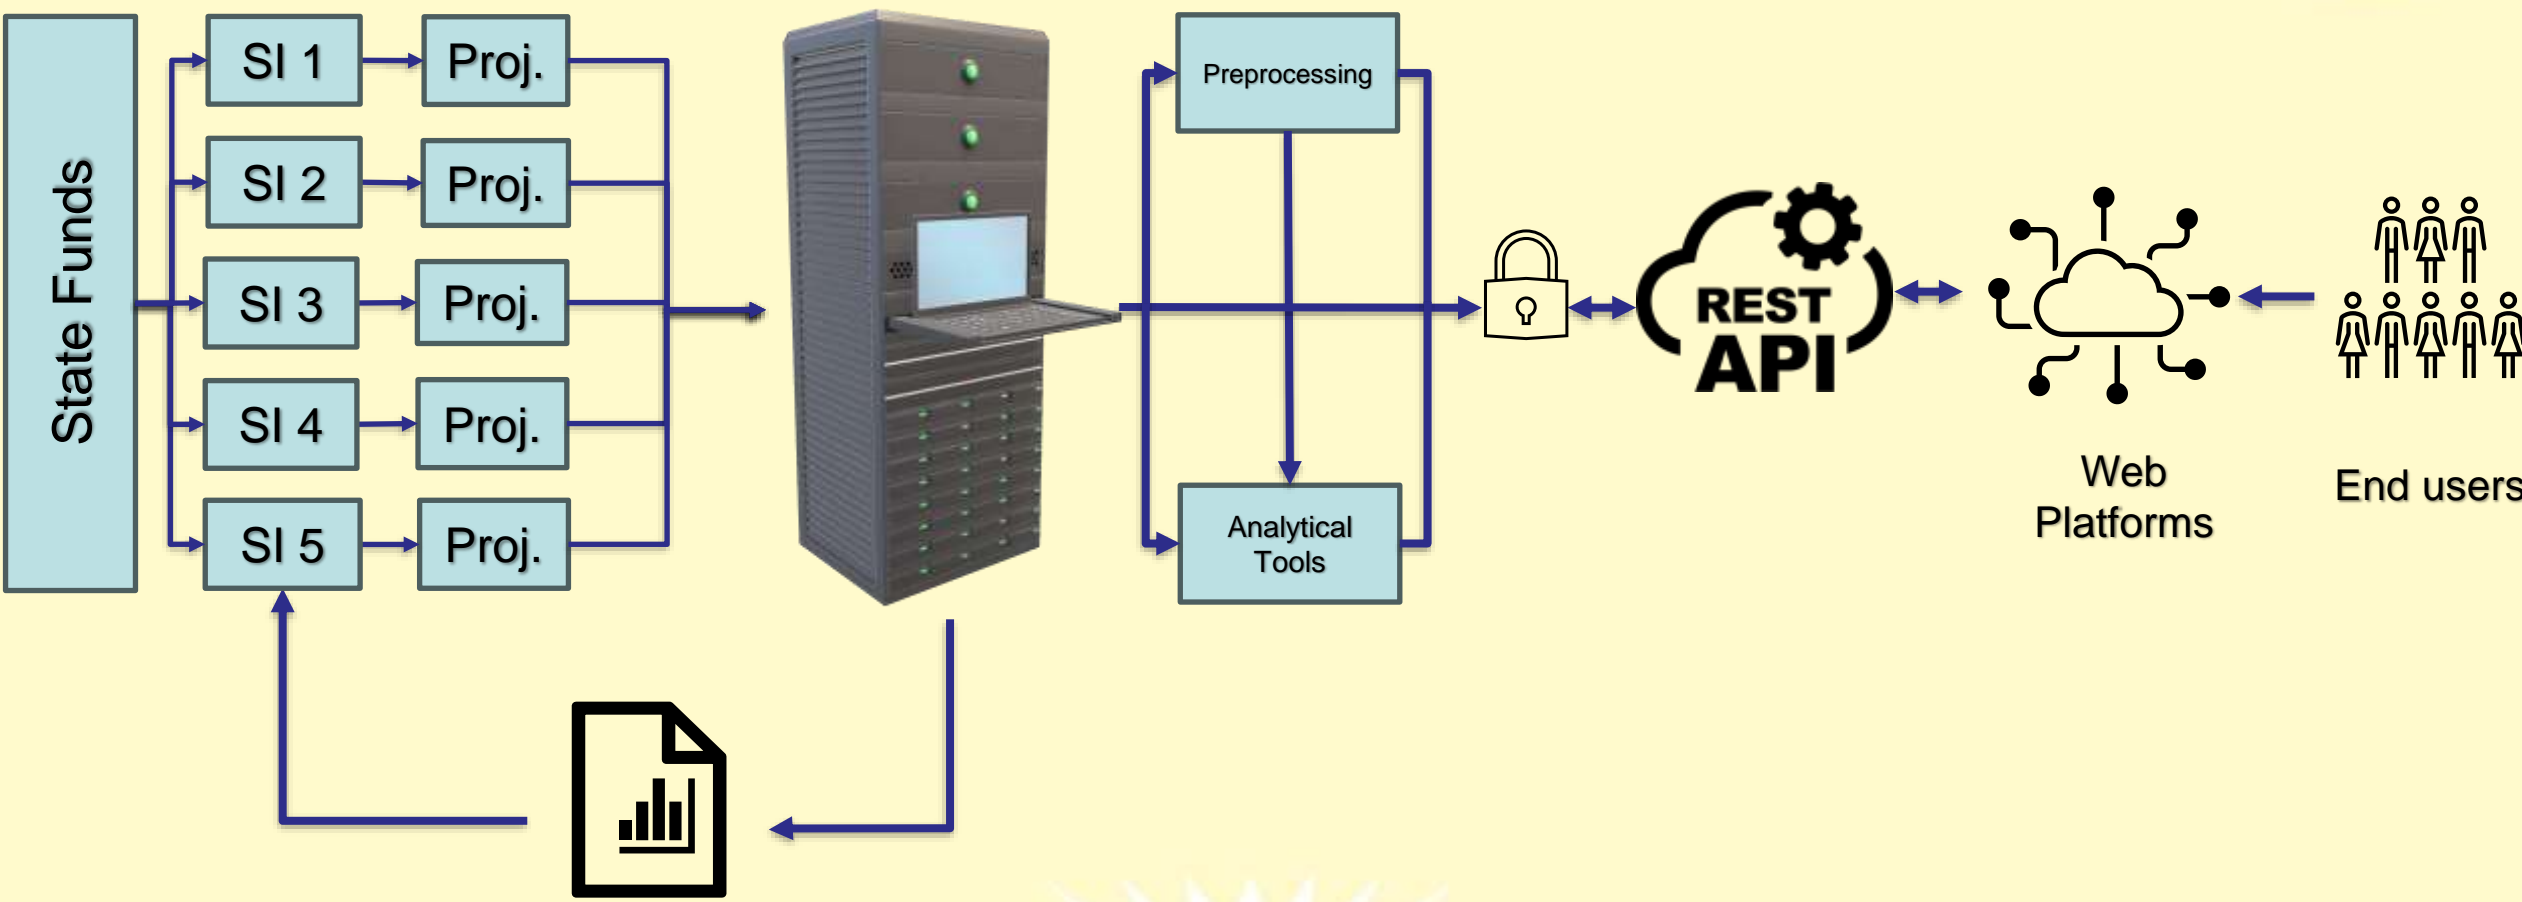

Proposed Framework

Centralised Framework for State-Funded Data **CF4SFD**

“Ensuring unrestricted access to state-funded data.”

CF4SFD Architecture

Data Sharing Report

Benefits of CF4SFD

CS4SD

Single access point for geospatial and non-geospatial data, including in situ data.

Promotes innovation, research and technological advancements (HRDEM, climate data)

Drives economic growth (support industries)

Improved data quality and consistency

Enhanced data security

Cost-effective

Facilitated compliance and governance

Better resource allocation

Product type

- Climate indices (3)
- Climate projections (40)
- In-situ observations (15)
- Reanalysis (48)
- Satellite observations (42)
- Seasonal forecasts (12)

Spatial coverage

- Europe (59)
- Global (97)

Provider

- Copernicus C3S (76)
- Copernicus CEMS (13)
- ESA CCI (4)
- EUMETSAT SAF (6)

Variable domain

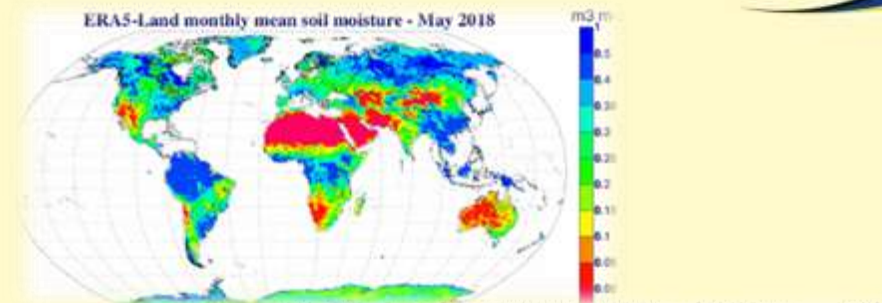

- Atmosphere (composition) (5)
- Atmosphere (surface) (46)
- Atmosphere (upper air) (38)
- Land (biosphere) (23)
- Land (cryosphere) (6)
- Land (hydrology) (29)
- Ocean (biochemistry) (1)
- Ocean (physics) (19)

Temporal coverage

- Future (57)
- Past (145)
- Present (56)

Sector

- Agriculture (8)
- Biodiversity (5)
- Coastal regions (8)
- Disaster risk reduction (4)
- Energy (4)
- Health (8)
- Infrastructure (2)
- Tourism (4)
- Transport (1)
- Water management (10)

Conclusion

Why is it crucial to ensure unrestricted access to state-funded data?

- Start a dialogue around CF4SFD which could lead:
 - Recommendation to changes to policies or formulation of new policies.
 - Support the implementation of the centralized framework
 - Participating in its development and usage
- Simplify data access
- Increase in data usage
- Promote data reuse (data circularity)
- Promote innovation
- Support and stimulate the industry, including the private sector.
